

This image shows a corner of a room where a light-colored wall meets a dark, textured floor. The floor appears to be made of a material like concrete or stone, characterized by numerous fine cracks and a mottled grey and white pattern. A large, prominent diagonal crack runs from the bottom left towards the top right. The lighting creates strong shadows along the edges of the floor and wall, emphasizing the texture and depth of the corner.

- The infographic illustrates the repair process for a large roof area (over 2500 sq ft). It consists of two main sections: **STEP 1** and **STEP 2**.

STEP 1: Shows a hand applying a liquid sealant to a concrete surface. A label indicates "Roof Area greater than 2500 sqft."

STEP 2: Shows a hand applying a repair mixture to cracks in the concrete. The mixture is composed of 1 part Cement, 3 parts Sand, and 1 part URP, with 10% weight of cement. An inset shows the mixing of these ingredients.
